# Ward-by-Ward

---

Issue No. 6 | March 31, 2022

---

Welcome to your weekly Engineering Ward-by-Ward update

## City Wide Projects

The Engineering Department had a follow-up meeting in regards to the updated PCI data from our consultant, StreetScan. We will be adding the Wards into the mapping system so we can breakdown PCI average PCI ratings and backlog per Ward. We discussed StreetScan building in sidewalk budgeting into the software so we can bulk up the budgeting aspect of the system. We have updated the contract prices in the software which increased our backlog from \$42,613,251 to \$45,798,921. Once we have fully finalized/QC'd the PCI data we will send everyone an up-to-date PCI map and it will be displayed on our City website as well.

---

### Ward 1

The Engineering Department continued door knocking this week on Bridge Street. Numerous people who were not home at the time of our visit have called us to discuss the project. We have been leaving our business cards at the residences/businesses when no one is home.

### Ward 2

The Engineering Department has requested our Grants coordinator, Catherine, look into applying for another Division of Marine Fisheries Grant to replace more of the fishing pier planks. The goal is to have the entire fishing pier boards replaced prior to the new restaurant opening. Attached is a progress photo of the Cabot St gas work. They are close to Washington St now.

### Ward 3

The three intersections contractor, AR Belli, is officially back in town and started work at intersection 3 (Henry's). Their schedule for the week ending on April 2nd is:

- Construction of Island on Dodge Street
- Curb installation at Firestation
- Concrete driveway at the Firestation

---

### Ward 4

The City was awarded a \$5,000 grant from the Massachusetts Historical Commission for the nomination of Lynch Park to the National Register of Historic Places.

### Ward 5

See the Ward 3 Three-Intersections update. After completing the work in the Henry's intersection the contractor will be moving to intersection one (Cabot/Rantoul Streets).

### Ward 6

National Grid Electric has completed their trenching work in the Thaxton neighborhood. They still need to completed some sidewalk work, loaming, seeding and overall cleanup.
